## **Major Activities of the Company:**

### **1- Consulting:**

**Al Anfal** is one of the qualified consulting Companies to prepare, instruct and supervise all Kinds and types of construction on Safety & Security needs in accordance to NFPA standards and requirements.

### **2- Design:**

**Al Anfal** has it's own engineers to design any types of safety & security project within the above mentioned outline needs.

### **3- Supply & Delivery:**

**Al Anfal** maintains a very healthy relationship with manufactures that it represents in various locations of America, Europe and Japan and hence it can supply any of the above-mentioned systems and it's spare parts within a very short period of time and at very competitive price.

### **4- Erection and Construction:**

Due to the latest and sophisticated equipment and qualified manpower, **Al Anfal** is well prepared to install all types of the systems mentioned above and to test & commission them to the operable condition as per requirements.

### **5- Operation & Maintenance:**

**Al Anfal** is established basically to carry out the services of the operation and maintenance for the systems mentioned in the outline.

Periodic preventive maintenance is carried out regularly to ensure the system in perfect condition and this is obtained by well-qualified engineers and skilled technicians well equipped with sophisticated testing and inspection instruments to check and to prevent any defect that may occur . This is followed by a field inspection report, these reports are recorded regularly according to each kind of service and international standard equipment and instructions are applied to these services.

**Al Anfal** tries to maintain minimum amount of down time to the systems. The response time to any call for maintenance and repairing or an emergency defects in the system is attained within 24 hours.

## Company Capability:

As a result of the major activities, any assigned work to **Al Anfal** will be undertaken by one of the team members, and in the implementation stages of the projects, the design office will perform technical supervision of the project plus test runs. The testing and commissioning team then carries out final installation, last adjustment and preparations for operations.

It is apparent that the advantages of this integrated mode of operation are numerous. Any Safety Project can be completed within maximum efficiency, preventing delays in delivery and similar problems, which might arise if parts of operation were out of the company.

Throughout this organization, the client can take full advantage of working with one company and at the same time he has the total capabilities of different groups at his disposal.

However, the specialized sides of a job are entirely in the hands of experts in the appropriate safety fields along with the most sophisticated workshop facilities with American and European equipment **Al Anfal** has the technology and facilities to carry out the maintenance and the repairs.

This enables our company to provide a wide range of services to secure the safety & security needs in the Industry and Civil Construction.

We are confident that our safety team can handle any task in the field of fire loss prevention needs in all kinds of industries.
